

# RTS01

## Remote Transmit Selector

Hands-free communication for pilot focus and aircraft safety.

### Highlights

- **Add** to your existing audio system to conveniently toggle the TX Select to your desired communicator audio without letting go of flight controls
- **Changing** TX selection is accomplished by toggling the RTS selector switch on the flight control unit until the desired transceiver is selected
- **Acts** as an expansion panel and RX Activity indicator, increasing the capability and capacity of the 'host' aircraft audio system

## RTS01 Features

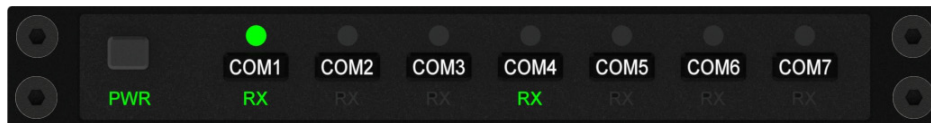

A helicopter cockpit is a busy place, especially when missions demand full attention. Releasing flight controls to reach and change your audio panel's transmit select switch can compromise focus and impact safety. AEM's Remote Transmit Selector unit addresses this problem, enabling pilots to conveniently toggle the TX Select to their desired communication radio without letting go of flight controls.

The RTS01 also acts as an expansion panel and RX Activity indicator, increasing the capability and capacity of the 'host' aircraft audio system.

An illuminated LED indicator above the specific transceiver legend indicates the selected transmitter. Changing TX selection is accomplished by toggling the RTS selector switch on the flight control until the desired transceiver is selected. An audible tone is provided from the RTS01 to indicate a valid input selection.

Omit radio traffic confusion with the RX ACTIVE feature—a simple annunciator that shows which radio(s) are actively receiving communications. The RX ACTIVE feature functions whether or not the operator has that particular radio audio input selected on or off at the audio panel.

- Snap-in legends
- NVIS lighting option
- Supports up to seven transmitters
- Hands-free operation
- DO-160F Compliant

## Specifications

### RTS01 MECHANICAL SPECS

Height	0.75"
Width	5.75"
Length	4.56" (EXCLUDING MATING SELECTORS)
Weight	0.8 lb
